

Mini-Hemp® As Poultry Bedding.

Made from the delicate woody core of fibre hemp. Hemp is super absorbent, natural anti-bacterial, dust-free, sustainable, eco-friendly product. It makes a warm and comfortable bed that provides good insulation against cold and protection against injury. **Mini-Hemp®** also absorbs ammonia very efficiently, reducing its harmful effects on the respiratory system, reduces odour and a natural fly repellent.

The super absorbent hemp bedding allows the bedding material to stay dry. By maintaining a dry bedding many problems such as hock burn, breast blister and pododermatitis will be reduced, if not eliminated.

Mini-Hemp® creates a dust free environment for the birds: eliminating respiratory, nasal and eye infections that are often found in birds housed on traditional materials such as wood shavings and straw.

Hemp bedding encourages the poultry to forage thus reducing boredom. Hemp bedding makes cleaning much easier, less frequently needed, and leaves the chicken coop smelling fresh. Once mucked out the soiled bedding breaks down within 8 weeks into quality organic garden compost.

Mini-Hemp® lasts longer so is economical, translating into dollar savings thru reductions in labour, transport and storage.

Mini-Hemp® Bedding absorbs up to 12 times more liquid than straw and 4 times more than shavings. Mini-Hemp is available in 12 Lt, 48 Lt and 140 Lt.

How Much Hemp Bedding For Your Chickens?

1 bag of **Mini-Hemp®** 140Lt will cover 3.5 square meter @ 5 cm deep. Change out the bedding as it becomes soiled.
