<b>Small flowering Shrubs, Roses,            Natives</b>	<b>4 Scoops per M<sup>2</sup></b>	<b>Mix into backfill soil</b>	<b>Spread around plant, 2cm away from stem and incorporate into top soil</b>
<b>WATER IN THOROUGHLY AFTER APPLICATION. WATER OFF ANY FERTILISER OFF FOLIAGE. APPLY EVERY 5-6 MONTHS FOR BEST RESULTS</b>			

**Potted Plants** – Troforte® M contains microbes therefore to ensure great results in potted plants, it is best to incorporate into the soil or simply make a few holes about halfway between the edge of the pot and the plant and pour Troforte® M in as per the above application rates. Cover the holes with soil and water in immediately.

**General Shrubs and Trees in ground** - Apply Troforte® M as per the above rates and lightly scratch into the surface with a garden rake or similar. It is very important to water in immediately after application to ensure that the microbes get activated.

**Note: Please do not apply Troforte® M in extremely hot conditions. Apply early mornings or late evenings and water in immediately.**
