

Mini-Hemp® As Garden Mulch.

Hemp is fabulous mulch, absorbing 4-5 times it's weight in moisture, and retaining it longer than other mulching materials. Favourable to microorganisms and biota such as earthworms. Surface of mulch remains generally dry so is less receptive to weed growth or evaporative water loss and frost damage. Superior insulating properties protecting the soil in hot summer or cold winter periods. Once wetted, fibres will progressively bind due to lignin and pectin content. This means the product is less prone to wind blowing once laid. Fully degradable and adds humus to soils. pH neutral.

Hemp mulch is primarily a surface application for:

- General home ornamental, pot plants, vegetable and bedding plantings
- Fruit trees and vines
- Container mulching (i.e. large shrubs)
- Compost "helper" and cover—allows effective separation of wet materials to discourage anaerobic conditions

Features and Benefits:

- Ease of handling and "softness" to the hands in its use
- Compressed material easy to tease-out and separate for use
- Material not prone to "caking" or creating impervious crust skin on surface
- Once wetted, fibres will progressively bind due to lignin and pectin content. This means the product is less prone to wind blowing once laid.
- Surface of mulch remains generally dry so is less receptive to weed growth or evaporative water loss and frost damage
- Superior insulating properties protecting the soil in hot summer or cold winter periods
- Durability of 4 to 9 months depending on thickness and situation
- Discourages snails and slugs due to its "terrain"

Mini-Hemp can be used through spring, summer, or autumn as a garden mulch to replace wood based mulches

To use as garden mulch spread Mini-Hemp about 5 cm deep over the garden area to keep plants moist and reduce weed pressure. Water as needed.

Mini-Hemp if left undisturbed, once dry will slightly crust over and will not blow away.

You can blend Mini-Hemp with other top mulches to change the appearance of your garden to suit your taste.
